Particle Board Flooring

20mm particle board flooring is screw fixed to a sub-frame of 75 x 50 pine with screws counter sunk for a neat safe finish. As with all components in our Atticstore System, we can supply, cut to size and install in the area you need for maximum storage efficiency.

Insulated Lining

Atticstore Systems use the latest Therma-bar insulation foil to line and partition your storage area. This unique double sided foil deflects moisture and, because it is white lined on the facing side, reflects the available light for maximum visibility. Therma-bar is a tough, durable lining that is easily trimmed to size and can be stapled to trusses and studs for a neat, clean and dust-free finish. Your attic storage area never looked so inviting!

Skytube Lighting

Ceiling storage areas are often dark – Atticstore Systems have the answer! We recommend and install Skytube roof lights, positioned on your roof to give all the natural day time light you'll need. You'll be amazed how well lit your new ceiling storage area can be. But the Skytube roof light goes even further – you can choose a model with a grill ventilation system that reduces the temperature in the attic as well as providing fresh air.

Sky Windows

For larger areas, you may need a Sky Window Panel. These are easily installed, provide excellent natural lighting and can be opened for extra ventilation. Sky Windows are recommended where attic areas are used for purposes other than only storage – you may have room for a study, den or studio.

Lights and Power

You use your attic in the evenings, not just during the day. Atticstore Systems can install electric lighting for incandescent and fluorescent lighting, as well as power points, should you ever need them.

Atticstore Systems - your Total Answer to Attic Storage

Call our representative now – we can measure, quote and install your complete Atticstore System. You order only what you need. All products have been thoroughly tested and are guaranteed commercial quality.
